Abstract

© J.UCS. Studying the Σ -reducibility of families introduced by [Kalimullin and Puzarenko 2009] we show that for every set $X \geq T \oplus \emptyset'$ there is a family of sets F which is the Σ -least countable family whose Σ -jump is Σ -equivalent to $X \oplus X$. This fact will be generalized for the class of n -families (families of families of... of sets).

Keywords

Countable family, Enumeration jump, Jump of structure, N-family, Σ -jump, Σ -reducibility
